

Vento 10

- 2-way bass reflex system
- Titanium-graphite technology
- 100 watts music power handling
- 19.5 x 30 x 9 cm (W x H x D)

€539.00 *

inkl. MwSt.

The modern look of the new Vento

We've redesigned the look and technology of our Vento premium speaker series. Thanks to the modern design, with discreetly curved side panels, rounded cabinet edges and high-quality surfaces with a perfect finish, the new Vento speakers have a very self-assured appearance. The harmoniously proportioned premium speakers offer a perfect balance between timeless elegance and powerful performance. This allows the Vento models to be used universally. The Vento 10 is a sound specialist for special applications: thanks to its minimal cabinet depth, the speaker can be used inconspicuously as a stereo or multi-channel speaker hanging on a wall. From there, the flat speakers inspire with an open, lively sound image and indulge with finely resolved details.

Titanium Graphite - High-quality technology

The Vento 10 relies on the outstanding technical characteristics of our newly developed drivers with titanium graphite diaphragms. The speakers are distinguished by their understated elegance due to the matt shimmering titanium graphite diaphragms. The drivers nestle seamlessly and without visible screw connections into the high-gloss lacquered baffles. The latest generation of wave surrounds, capable of particularly large excursions, ensure deep bass and high power handling. The new driver technology is based on the previous titanium drivers: their surface is treated in a complex chemical process and acoustically brought to a new level. The aim was to minimise the partial vibrations that damage the sound. With less weight, the new titanium graphite chassis are stiffer and have better damping. In addition, the new drivers work as perfect piston transducers and thus offer ideal conditions for reproducing acoustic signals with high fidelity.

Noble enclosure for the best sound

The new cabinets not only look elegant, they also have to meet our high technical requirements. The revised design ensures that there is more interior volume available to tune the speakers with more bandwidth in the low frequency range. This gives the new Vento speakers an even more contoured and clean sound. On the other hand, the revised cabinet radii and the new basic shape ensure less sound interference from the cabinet itself. With a variety of cabinet finishes available, the modern and timelessly elegant Vento loudspeaker models feel at home in many interior design styles. At the same time, the cabinets of the new Ventos meet the highest

standards of workmanship. The perfect surface finish of the multi-layered lacquered Vento models makes the speakers look particularly elegant and refined.

Eyes on the details

The speaker terminals in the new Ventos have been redesigned both visually and technically to ensure maximum conductivity. The solid screw terminals, in single or bi-wiring design depending on the Vento model, hold cable cross-sections of up to 10 mm² and offer the option of accommodating speaker cables with banana plugs or fork bridges. The upgraded terminals have a special high-quality and conductive material, with new terminals and a finer thread. As a result, we also achieve reference-worthy contacting in the Vento series for perfect sound development and long-term stable contact to connected amplifiers. The innovations of the

Vento series continue with the high-quality fabric covers. If necessary, they conceal a direct view of the technology and hold onto the baffles with powerful magnets. The straight panels at the top and discreetly curved panels at the bottom provide an unobtrusive, calm appearance.

Well selected technology

Apart from their elegant appearance, the Vento 10 wall speakers impress with their high technical quality. Sophisticated damping of the enclosures and selected crossover components of the highest quality optimise the sound of these speakers, which are only 9 centimetres thick. In each of the elegant, closed cabinets, a 154 mm titanium graphite bass/midrange driver provides clean bass. Thanks to Wave Bead technology, the Vento 10s follow acoustic signals quickly and precisely. Our high-calibre 25 mm dome tweeter with aluminium oxide ceramic diaphragm makes the Vento 10 a speaker with a broadband performance.

CANTON

Type	Wall and ceiling speaker
Engineering Principle	2-way bass reflex
Nom. /Music power handling	60 / 100 watts
Frequency response	40...40.000 Hz
Crossover frequency	3.000 Hz
Tweeter	1 x 25 mm (1"), Ceramic
Warranty	5 Jahre
Nominal Impedance	4...8 ohms
Dimensions (WxHxD)	19,5 x 30 x 9 cm (7.7" x 11.8" 3.5")
Weight	5 kg
Carton Content	Vento 10 (pair) Equipment feet Fabric grill (black) Manual
